A galaxy cluster hotter than the surface of the sun is shocking researchers

*A recent paper published in *Nature* examines a galaxy cluster that formed approximately 12 billion years ago, which is notably hot for its age, contrary to current theories suggesting that younger clusters should exhibit cooler temperatures. Astrophysicist Jorge Moreno likens this phenomenon to observing a city like Las Vegas in the late 1700s.*

Researcher Dazhi Zhou emphasizes that this marks the first identification of such a hot galaxy cluster at this early stage in the universe's history. Scientists continue to investigate the underlying reasons for its unexpected temperature. (Source :NPRj

China's "artificial sun" just broke a fusion limit scientists thought was unbreakable

Researchers utilizing China's "artificial sun" fusion reactor have made significant progress by surpassing a long-standing density barrier in fusion plasma. The experiment demonstrated that plasma can maintain stability at extreme densities, provided that its interaction with the reactor walls is meticulously managed. This breakthrough addresses a critical challenge that has hindered advancements toward achieving fusion ignition. Consequently, this development may enhance the power output of future fusion reactors, paving the way for more efficient energy production. By effectively managing the plasma-wall interactions, scientists can optimize the conditions necessary for sustained fusion reactions, potentially leading to more viable and sustainable energy solutions. NASA is set to return astronauts from the International Space Station earlier than scheduled due to a medical concern.

NASA has announced the early return of four astronauts from the International Space Station, a month ahead of schedule, due to a medical issue—marking the first evacuation of its kind in the agency's 25-year history. While specific details regarding the affected crew member and the nature of the medical concern remain confidential, NASA reports that the situation is stable. Administrator Jared Isaacman emphasized that the decision was made in consultation with health officials, prioritizing the well-being of the astronauts. A timeline for their return has yet to be established.

People in Tehran and other Iranian cities protest after crackdown by authorities

Several people who protested in Iran over the past few days have spoken about seeing enormous crowds as well as brutal violence on the streets of Teheran, with one woman saying she saw "bodies piled up on each other" in a hospital. A woman in her mid-60s and a 70-year-old man described seeing people of all ages out in the streets of the Iranian capital on Thursday and Friday. On Friday night, however, security forces brandishing military rifles killed "many people," they said speaking on the condition of anonymity for security reasons. The protests, which began on December 28 as demonstrations in Teheran's bazaars over rampant inflation, have since spread to more than 100 cities, posing the biggest challenge to the Iranian regime in years. 'Cloud-9' is a newly discovered celestial object. It could help solve a cosmic mystery

Astronomers may have discovered a previously unknown type of astronomical object, nicknamed "Cloud-9," that could shed light on dark matter, one of the biggest mysteries in the universe.

Dark matter is an enigmatic substance that shapes the cosmos and provides it with structure. While it has never been directly observed, dark matter is believed to make up 85% of the total matter in the universe and can be detected due to its gravitational effects. Cloud-9 is thought to be a dark matter cloud that could be a remnant of galaxy formation from the early days of the universe, according to new research published Monday in The Astrophysical Journal Letters. Broccoli Beef

stirfry

Discover the vibrant fusion of flavors in our Broccoli Beef Stir-Fry, where tender strips of beef meet crisp, fresh broccoli in a symphony of savory delight. Perfect for a quick yet indulgent meal that will captivate your taste buds!

- ***Ingredients:****
- 30 baby broccoli florets
- ½ pound of grass-fed beef, sliced thinly
- 1 tablespoon of soyaki sauce
- 2 teaspoons of zesty green curry paste
- 1 red bell pepper, julienned
- A handful of crunchy snow peas
- 1 tablespoon of freshly grated ginger
- 2 cloves of garlic, minced
- 1 tablespoon of sesame oil
- A sprinkle of toasted sesame seeds for garnish
- Fresh cilantro leaves for added flavor
- A dash of lime juice for a refreshing finish

- ***Preparation and Cooking Instructions:****
 - 1. ****Prepare Ingredients:****
 - Trim 30 baby broccoli florets.
 - Slice ½ pound grass-fed beef into thin strips.
 - Julienne 1 red bell pepper.
 - Gather snow peas.
 - Grate 1 tablespoon fresh ginger and mince 2 cloves garlic.
 - Measure 1 tablespoon soyaki sauce, 2 teaspoons green curry paste, and 1 tablespoon sesame oil.
 - Set aside fresh cilantro and toasted sesame seeds for garnish.
 - 2. ****Cooking Process:****
 - Heat sesame oil in a skillet over medium-high heat.
 - Stir-fry beef until browned, then add garlic and ginger for 1 minute.
 - Mix in soyaki sauce and curry paste.
 - Add broccoli, bell pepper, and snow peas; stir-fry until tender-crisp.
 - Drizzle with lime juice.
 - 3. ****Final Touches:****
 - Serve in a dish, garnished with sesame seeds and cilantro.
- Enjoy!
