Dover under state of emergency after tornado causes widespread damage

A confirmed tornado struck Dover, Delaware, on Thursday, causing significant damage to infrastructure, including hotels, trees, and power lines, leading to widespread power outages. In response, the mayor declared a state of emergency, and police blocked off roads while crews worked to clear debris and restore electricity. Despite the destruction, no injuries were reported. Residents described the storm's arrival as sudden and intense, with powerful winds and rain. The hardest-hit areas included the Superlodge and Days Inn on North Dupont Road, where roofs were torn off and debris littered the highway. Many, like Randall Butler, found themselves displaced and seeking alternative shelter. Authorities urged residents to stay home due to hazardous conditions, including non-functioning traffic lights. Drivers were advised to treat intersections as four-way stops and remain vigilant. Police continued to assess the damage and warned against approaching downed power lines, emphasizing the need for caution in the aftermath of this unexpected and extraordinary weather event.

This weight-loss hormone may protect the liver even without weight loss

Researchers at McMaster University have made a groundbreaking discovery regarding the hormone GDF15, traditionally tied to appetite suppression and weight loss. Published in *Cell Metabolism* on August 10, 2026, the study uncovers GDF15's unexpected role in protecting the liver from inflammation via a novel signaling pathway. This finding challenges the conventional view that the hormone's benefits are primarily linked to weight management. Metabolic dysfunction-associated steatohepatitis (MASH), a severe form of fatty liver disease, affects millions and can lead to serious conditions such as cirrhosis and liver failure. Although weight loss medications have improved outcomes, liver inflammation often persists. The research indicates that GDF15 can reduce liver inflammation and fibrosis even without weight reduction, introducing a new approach for treating advanced liver diseases. Gregory Steinberg, a senior author of the study, highlights that GDF15 activates a brain-to-liver pathway, suggesting a broader role for the hormone in defending against chronic liver injury. This insight opens the door to innovative therapies targeting liver inflammation alongside traditional treatments.

2,200-year-old Roman shipwreck reveals ancient waterproofing secrets

A recent study on the Roman Republic shipwreck Ilovik-Paržine 1, which sank 2,200 years ago off the Croatian coast, sheds light on ancient waterproofing techniques. Researchers discovered that the ship's hull was protected using pine tar and a beeswax-tar mixture called zopissa, enhancing flexibility and application ease. Through molecular and pollen analyses, the study traced the coatings' origins, revealing a mix of Mediterranean and Adriatic vegetation, suggesting multiple repairs across different regions. This research highlights the importance of organic waterproofing materials in ancient shipbuilding, providing insights into historical naval technologies and repair practices across the Adriatic.

Sekela Kitchen brings Ethiopian flavors to Reading Terminal Market

Reading Terminal Market has a new destination for Ethiopian food. Sekela Kitchen celebrated its grand opening Thursday, Aug. 20, 2026, becoming the Philadelphia market's first merchant offering Ethiopian cuisine.

The fast-casual restaurant serves authentic dishes including doro wat, injera and sambusa, with a build-your-own bowl-style menu available for breakfast, lunch and dinner.

For owner Marta Kebede, opening Sekela Kitchen has been a dream come true. Kebede grew up in the kitchen of her mother's restaurant in Ethiopia. After coming to America in 2007, she spent years working at businesses around Reading Terminal Market, including in the area that is now The Fashion District. She later served as manager of Era, an Ethiopian restaurant in Philadelphia's Brewerytown neighborhood. In 2017, Kebede set her sights on becoming a business owner inside Reading Terminal Market. Years of financial preparation followed, along with business planning delays caused by the COVID-19 pandemic. Now, that goal has become a reality.

Reading Terminal Market is open 8 a.m. to 6 p.m., seven days a week. (NBC)

Scientists discover how gut bacteria "train" the intestine to fight inflammation

Northwestern Medicine researchers discovered that butyrate, a compound produced when gut bacteria break down dietary fiber, can create a lasting protective effect in the gut. This compound trains intestinal lining cells to continue promoting anti-inflammatory immune responses even after butyrate is no longer present. In their study, mice given butyrate showed increased production of the immune-calming molecule IL-10 and were more resistant to colitis-like disease. The effect persisted, with treated mice losing less weight and experiencing less tissue damage. This protective response was evident even in germ-free mice, indicating that butyrate establishes a lasting immune-regulating environment independent of continuous microbial activity. The findings highlight butyrate's potential in promoting long-term gut health and immune tolerance.

Spiced Coconut Chicken Berbere

Ingredients

- 500 grams boneless, skinless chicken thighs, cut into 2.5 cm pieces
- - 400 ml full-fat coconut milk
- - 2 tablespoons berbere spice blend
- - 1 fresh red chilli, deseeded and finely minced
- - 15 grams fresh ginger, grated
- - 3 garlic cloves, minced
- - 15 ml coconut oil
- - 1 lime, juiced

1. Heat coconut oil in a large pan or Dutch oven over medium heat.
2. Add minced garlic, grated ginger, and minced red chilli. Sauté for 2 minutes until fragrant.
3. Stir in the berbere spice blend and cook for another minute, allowing the spices to bloom.
4. Add the chicken pieces to the pan and sear for 5-7 minutes until lightly browned on all sides.
5. Pour in the full-fat coconut milk, scraping up any browned bits from the bottom of the pan.
6. Bring the mixture to a gentle simmer, then reduce heat to low, cover, and cook for 25-30 minutes.
7. Stir occasionally, until the chicken is cooked through and tender, and the sauce has slightly thickened.
8. Remove from heat, stir in the fresh lime juice, and adjust seasoning if needed.
