## Matthew Perry's assistant sentenced to three years, five months in actor's drug overdose death

*Kenneth Iwamasa, the personal assistant to Matthew Perry, has been sentenced to three years and five months in federal prison for administering ketamine injections that led to the actor's overdose in a hot tub in 2023. In addition to the prison sentence, Iwamasa was fined \$10,000 and must surrender by July 17. At 59 years of age, he was the last of five individuals charged in connection with Perry's tragic death.*

*During the sentencing, Keith Morrison criticized Iwamasa for betraying Perry, highlighting that he ignored warnings from the actor's family regarding his struggles with addiction. Morrison described Iwamasa as having taken control of Perry's life, while Lisa Ferguson referred to him as the "monster" responsible for Perry's demise. Iwamasa expressed remorse for his actions, stating, "I've done illegal acts that I will forever regret."*

## Hatching of three eaglets in nest at Kerr Park in Downingtown causes area to be blocked off

*Bald eagles are nesting in Kerr Park, with a nest maintained since October 2024. The adult pair, Lloyd and Connie, recently had three eaglets. Corinne Badman, assistant borough manager, noted the rarity of nesting eagles in public spaces. A protected buffer zone with fencing and signage surrounds the nest, monitored by local authorities. Protections will remain for 12 to 16 weeks post-hatching, likely until early August. Borough officials will relocate Downingtown Good Neighbor Day fireworks away from the park, and violators entering the area or using drones may face fines up to \$100,000. Reports of habitat harassment can be made to local authorities. (Source: Philly Voice)*

## Scientists break 30-year superconductivity record at normal pressure

Researchers at the University of Houston achieved a new superconducting temperature record of 151 Kelvin (-122°C) under ambient pressure, significant for superconductivity advancements. This breakthrough could enhance electrical grids, energy storage, and medical imaging. Led by Ching-Wu Chu and Liangzi Deng, the study was published in the Proceedings of the National Academy of Sciences and funded by various organizations. Superconductors enable zero-resistance electricity flow, improving efficiency but traditionally require costly cooling. The new record surpassed barriers set in the late 20th century and utilized pressure quenching to maintain superconducting properties. While room-temperature superconductivity remains a goal, this achievement brings researchers closer to that possibility. (Source: Science Daily)

## Live frog found in salad bag

*A live frog named Greg was discovered inside a sealed bag of lettuce purchased at a Woolworths supermarket in Esperance, Western Australia. The resident, Rhys Smoker, found the amphibian while preparing dinner, and his housemates initially thought he was joking until he presented the animal in their lounge room.*

*The household eventually released the frog at a nearby pond while playing the song "Crazy Frog" as a "send-off tune." Woolworths has apologized for the incident, provided a replacement bag of lettuce, and launched an investigation with its suppliers. This event follows previous unusual supermarket encounters in Australia, including a diamond python found on a shelf in 2021.*

## The Ocean's 'T. Rex': New 43-Foot Prehistoric Marine Apex Predator Identified

Tyrannosaurus rex now faces competition for its title, owing to the emergence of Tylosaurus rex, a formidable 43-foot marine predator that once ruled the ancient oceans. Unlike dinosaurs, Tylosaurus rex was a mosasaur from the Cretaceous Period, approximately 80 million years ago, inhabiting the inland sea that spanned parts of North America, including present-day Texas.

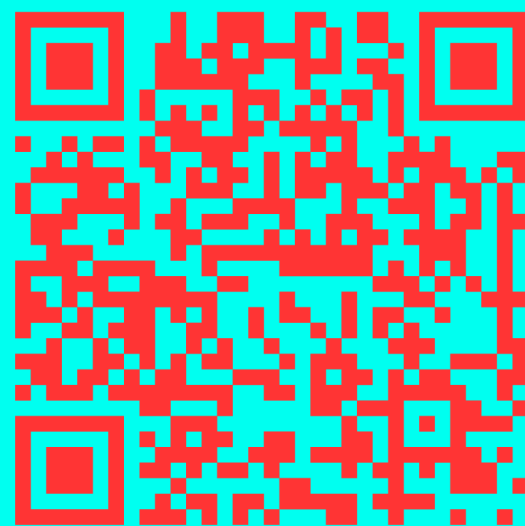

This revelation did not arise from a new excavation but rather from the analysis of existing museum collections. Amelia Zietlow from the History Museum at the Castle in Wisconsin, in collaboration with Michael J. Polcyn from Southern Methodist University, has identified it as a distinct species, contrary to the previously believed Tylosaurus proriger. Tylosaurus rex measured approximately 30 to 35 feet in length, featuring large skulls and serrated teeth adapted for predation.

Many of the fossils contributing to this discovery were provided by amateur paleontologists in Texas. Zietlow emphasized the significance of collaboration in the field of paleontology, noting that major discoveries often emerge from the careful study of existing collections in museums. (Source: CNN)

## Lemon Chicken

- Ingredients
- CHICKEN
- MARINADE
- ☐ 600-750g / 1.2 – 1.5 lb chicken breasts (4 pieces) or boneless thigh (Note 1)
- ☐ Zest of 1 lime (zest before juicing)
- ☐ 4 tbsp lime juice (1 – 2 limes)
- ☐ 2 garlic cloves , minced
- ☐ 3 tbsp brown sugar
- ☐ 1/4 tsp pepper
- ☐ 1 tbsp olive oil
- ☐ 2 tbsp finely chopped cilantro/coriander (optional)
- ☐ 1 tbsp fish sauce (OR 2 tbsp soy sauce) (Note 2)
- TO COOK
- ☐ 1 – 2 tbsp olive oil
- Pound the thick end of chicken breast to about 1.7 cm (2/3") thickness (not necessary for thighs).
- Combine chicken and marinade in a ziplock bag, massage, and refrigerate for 12-48 hours.
- Discard marinade before cooking.
- \*Cooking Methods (Internal Temp: 165°F/75°C):\*\*
- \*\*Stove:\*\* Heat oil in skillet over medium-high; cook chicken for 3 minutes on each side until golden.
- \*\*BBQ:\*\* Brush grills with oil, heat to medium-high; cook chicken for 3 minutes on each side.
- \*\*Oven:\*\* Preheat to 425°F; bake for 15 minutes, then broil for 3 minutes for caramelization.
- \*Rest and Serve:\*\*
- Let chicken rest for 3 minutes, garnish with coriander, lime, and chili if desired, then serve.
