Tracking the winter storm: snow heading to Northeast

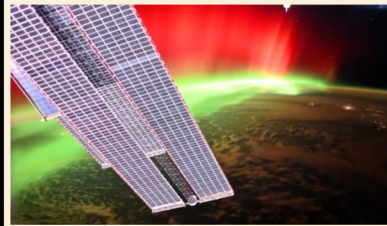

A severe cold front is poised to impact the Northeast beginning Friday night, January 17th, 2025, with sub-freezing temperatures expected to affect major cities, including New York City and Philadelphia. Residents should prepare for a particularly frigid weekend. Subsequently, on Sunday, January 19th, a storm system will move into the region, bringing a mix of snow and ice that will extend from Washington, D.C., to New York City and Boston. While the precise forecast for snowfall and ice accumulation remains uncertain, there is a significant possibility of substantial accumulations. The American weather model currently indicates that heavy snowfall may occur along much of the Interstate 95 corridor, particularly from Philadelphia to New York City and extending to Boston, with snowfall expected to persist until Monday morning (ABC News).

Spectacular aurora captured from space by Russian cosmonaut – video

Aurora Borealis, or the Northern Lights, were captured on camera by cosmonaut Sergey Kud-Sverchkov from Russia's space agency Roscosmos aboard the International Space Station. This stunning phenomenon occurs when solar storms release high-speed charged particles that collide with gases in Earth's atmosphere. While green is the predominant color observed during these displays, hues such as pink and red can also appear.

"During yesterday's strongest storm in two decades, there was a remarkable red glow. It felt as if we were literally sailing within that light," Kud-Sverchkov noted on his Telegram channel on January 20 (The Guardian).

Vampire Film *Sinners* Achieves Record Number of Oscar Nominations*

Vampire horror film Sinners has broken the record for the most Oscar nominations received by a single film, after being nominated for 16 of Hollywood's most coveted honours.

The film beat the previous record of 14 nominations, and emerged ahead of its nearest rival this year, Leonardo DiCaprio's thriller One Battle After Another, which is up for 13 awards.

Sinners' contenders include its star Michael B Jordan and his British co-stars Wunmi Mosaku and Delroy Lindo.

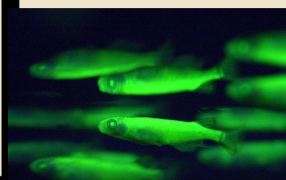

Other big names up for trophies include Timothée Chalamet, who is hoping for third time lucky after two previous nominations, and Irish actress Jessie Buckley, who is the frontrunner to win best actress for Hamnet. (Source: BBC)

Remote controlled' proteins illuminate living cells

Researchers have engineered magnetically controlled fluorescent proteins that can be remotely dimmed and brightened in cells and living animals. The hope is that these proteins' magnetic sensitivity — a quantum effect — can be exploited to develop remote-controlled biosensors, and even therapies that can be turned on and off when needed.

"We want to make a toolbox of magnetically remote-controlled protein functions," says Andrew York, a physicist at the Chan Zuckerberg Biobub in San Francisco, California. York is a co-author of a study, published today in Nature, that deployed the magnet-responsive proteins in bacteria¹, as well as a co-author of a separate preprint study² that demonstrated the use of similar proteins in nematode worms. The Shape of Earth and the Distinctive Exoplanet PSR J2322-2650b

Earth is not a perfect sphere. Its rotation causes a slight bulge at the equator, making it approximately 0.3 percent wider in that region than from pole to pole. However, this difference pales in comparison to PSR J2322-2650b, a planet with a mass similar to Jupiter, recently studied by the James Webb Space Telescope. This planet boasts an equatorial diameter that is about 38 percent wider than its polar diameter, giving it a peculiar lemon-like shape and an unusual atmosphere. "It's the stretchiest planet that we've confirmed the stretchiness of," noted Michael Zhang, an exoplanet scientist at the University of Chicago and the lead author of a paper describing the planet, published Tuesday in *The Astrophysical Journal Letters*.

PSR J2322-2650b was discovered in 2011 by the Parkes radio telescope in Australia and is located over 2,000 light-years from Earth. This gas giant quickly garnered interest due to its size and its orbit around a pulsar, a dense, rapidly spinning star that remains after a supernova. Pulsars are characterized by their emission of jets of radiation from their poles. This particular planet orbits just one million miles from the star, completing its revolution in roughly eight hours, making it the only known gas giant to orbit a pulsar.

Garlic Herb Steak Bites

Indulge in the irresistible allure of Garlic Herb Steak Bites—a culinary delight that promises to tantalize your taste buds. Picture succulent morsels of steak, perfectly seared and infused with a harmonious blend of garlic and fresh herbs. Each bite offers a burst of savory flavor, transporting you to a world of exquisite dining. Prepare to be captivated by this mouthwatering creation, an elegant yet effortless addition to any meal.

- Season the steak pieces with salt, pepper, and paprika. Ensure each piece is well coated.
- Heat the canola or vegetable oil in a large skillet over medium-high heat.
- Add the steak pieces to the skillet and sear them for about 3-4 minutes on each side until browned. Remove the steak from the skillet and set aside.
- Reduce the heat to medium and add the butter to the skillet. Once melted, add the minced garlic, onion, and red bell pepper. Sauté until the onion is translucent and the bell pepper is tender.
- Return the steak to the skillet, mixing it with the sautéed vegetables.
- Stir in the minced parsley and cilantro, ensuring even distribution throughout the dish.
- Drizzle the lemon juice over the mixture and stir well.
- Cook for an additional 2-3 minutes, allowing the flavors to meld together.
- Serve hot, garnished with extra parsley or cilantro if desired.

- 1 lb steak, cut into bite-sized pieces
- 1/2 tbsp salt
- 1/2 tbsp pepper
- 3 tsp paprika
- 1 tbsp canola or vegetable oil
- 3 tbsp butter
- 4 cloves garlic, minced
- 2 tbsp parsley, minced
- 2 tbsp cilantro, minced
- 1 onion, finely chopped
- 1 red bell pepper, diced
- 1 tsp lemon juice
