## The 'No Kings' protest march happens nationwide this weekend

Thousands protested nationwide today against the current administration's policies in the third "No Kings" demonstration amid rising tensions, including a new conflict with Iran and a partial government shutdown. In the Twin Cities, organizers expressed concerns over federal arrests of immigrants without warrants, unauthorized military actions, and threats to nationalize elections, which they view as an "assault on democracy." The St. Paul rally featured prominent figures like Bruce Springsteen and Bernie Sanders, with attendees sharing personal motivations related to recent ICE operations. Local activists framed the event as a day of healing for the two American lives lost during these operations, while a Reuters/Ipsos poll indicated growing discontent, with only a third of Americans approving of the President's performance. ## NASA to spend \$20 billion to build a base on the moon

NASA has decided to abandon its plans for a lunar orbit space station, redirecting its efforts towards the construction of a \$20 billion base on the moon's surface over the next seven years, as announced by the new chief, Jared Isaacman. This strategic shift will have implications for the Artemis program, leading to a temporary suspension of the Lunar Gateway station, which was designed as a research platform and transfer station for lunar landers. Isaacman acknowledged the complexities involved in repurposing existing hardware and contracts but underscored the necessity of establishing infrastructure that supports sustained lunar operations. These changes are compelling companies to adapt swiftly in light of the competitive landscape, particularly with China's ambitious goal of a moon landing by 2030. (Source:NBC)

## These strange pink rocks just revealed a hidden giant beneath Antarctica

Bright pink granite boulders in West Antarctica's Hudson Mountains led to a major discovery of a massive buried granite mass beneath Pine Island Glacier, measuring nearly 100 km wide and 7 km thick. Researchers from the British Antarctic Survey found that these rocks formed around 175 million years ago during the Jurassic period. Using gravity measurements from aircraft, they connected surface boulders to the hidden granite body beneath the ice, revealing that the glacier's movement pattern was different in the past. This discovery provides insights into the glacier's behavior during the last ice age and aids in improving models predicting Antarctica's ice sheet response to climate change, highlighting the significance of historical data for understanding future environmental impacts. ## Cristopher Sánchez blanks Rangers on Opening Day

Remarkable is one way to describe what Cristopher Sánchez and Kyle Schwarber did for the Phillies in 2025. Ask anyone around Philly. Both, fresh off new contracts, shone on a sun-splashed Opening Day at Citizens Bank Park. From the moment his cleat bit the dirt, Sánchez was in control. The left-hander tallied 10 strikeouts over six scoreless innings with no walks, leading to the Phillies' 5-3 win over the Rangers. His changeup was nearly untouchable, with opponents hitting just .169 against it last season. Sánchez threw more changeups than anyone else in 2025, nearly 100 more than the next pitcher. ## First atlas of brain organization shows development over a lifetime

Scientists have developed the first comprehensive atlas of brain 'chatter' patterns, which maps functional connectivity across nearly 3,600 individuals spanning from infancy to old age. This extensive guide reveals how the connectivity between different brain regions is related to cognitive performance in young adults and could potentially aid in the early identification of developmental issues and neurodegenerative conditions. The organization of the brain's functional connectivity is structured along three main axes, including a sensory-to-association axis. This particular axis illustrates the transition from sensory processing to complex thought, highlighting how brain regions transition from processing sensory information to engaging in more sophisticated cognitive tasks. (Nature)

Understanding the organization of brain connectivity throughout the human lifespan is essential for gaining insights into brain function, marking a significant advancement in neuroscience research. The creation of this atlas is an important step forward in comprehending how these connectivity patterns evolve over time and how they influence cognitive abilities. Such an understanding could pave the way for novel approaches to diagnosing and managing brain-related conditions, ultimately contributing to improved brain health across the lifespan.

# March Madness!

## Ingredients: Seasonings

- ☐ ¾ teaspoon EACH:  
dried basil, oregano,  
parsley, mustard powder
- ☐ ¼ teaspoon EACH:  
dried thyme, onion  
powder, pepper
- Sauce/Pasta**
- The Bulk:**
- ☐ 4 tablespoons butter,  
divided
- ☐ 4 cloves fresh garlic,  
minced
- ☐ 2 ¾ cups chicken  
broth
- ☐ ¾ cup half and half
- ☐ 1 teaspoon soy sauce
- ☐ ½ chicken bouillon  
cube
- ☐ ¾ cup Parmesan  
cheese, freshly grated
- ☐ 2 tablespoons fresh  
lemon juice
- ☐ ½ lb. Shellbow pasta

## Garlic Butter Pasta

### Instructions

- Combine the seasonings and set aside. Measure out remaining ingredients before beginning. This recipe goes quick, so you want to be ready.
- Add 3 tbsps. of the butter to a soup pot over medium heat. Add the garlic and seasonings. Stir continuously until the butter starts to foam.
- Add the chicken broth, half and half, soy sauce, and bouillon cube.
- Bring to a boil and add the pasta. Bring back to a gentle boil and cook uncovered according to package instructions. Run a silicone spatula along the bottom of the pot throughout cooking to lift any pasta that may be settling to the bottom. Taste-test the pasta for doneness before proceeding.
- Reduce heat to low and gradually stir in the Parmesan cheese. Remove from heat and add the lemon juice.
- Add the remaining 1 tablespoon of butter and cover the pot to let it melt. Gently stir it into the pasta and serve!
