Tylenol in pregnancy not linked with autism, Danish study finds

A Danish study published on Monday found no link between Tylenol use during pregnancy and autism in children. It analyzed data from over 1.5 million children born between 1997 and 2022, with 31,098 exposed to Tylenol. Autism was diagnosed in 1.8% of exposed children and 3% of the unexposed group, as per JAMA Pediatrics. This finding stood even after considering dosage and trimester factors. A 2024 Swedish study also found no link between Tylenol use in pregnancy and autism. However, a 2025 U.S. review of 46 studies suggested a potential link between prenatal acetaminophen exposure and neurodevelopmental disorders but didn't prove causation. Researchers advised pregnant women to use acetaminophen as needed, at the lowest dose, and briefly. In September, the U.S. FDA began changing acetaminophen labels to warn of a possible increased autism and ADHD risk with use during pregnancy. President Donald Trump advised against its use by pregnant women, but medical groups criticized his comments as lacking evidence. U.S. Health Secretary Robert F. Kennedy, Jr. stated that while there's no definitive link, Tylenol should be used cautiously. (Source: CNN)

Fool's gold isn't so foolish: Scientists find hidden treasure in pyrite

The global shift towards electrification and renewable energy has increased lithium demand, challenging sustainable and cost-effective sourcing. Traditionally extracted from pegmatites and volcanic clays, researchers are now exploring unconventional sources like recovering lithium from industrial waste. Researchers from West Virginia University have found lithium in middle-Devonian shale from the Appalachian basin, a sedimentary rock about 380 million years old. This shale, rich in organic material, contains lithium within pyrite, linking lithium to sulfur-rich minerals. This discovery, led by sedimentary geochemist Shailee Bhattacharya, suggests organic-rich shale may host lithium in new ways, offering a potential new resource. With widespread shale formations, this could impact future supply chains. Although preliminary and location-specific, extracting lithium from shale or industrial waste might reduce new mining needs, decreasing environmental impact and supporting clean energy. Bhattacharya emphasizes sustainable energy practices, highlighting their importance in resource management. (Source: Science Daily)

Ignite the Orange: The Flyers' Playoff Charge Begins

The Philadelphia Flyers are launching the "Ignite the Orange" campaign for their Stanley Cup Playoff return, aiming to unite the city and bring the Cup back to Philadelphia. Partnering with the Tri-State Toyota Dealers Association, Toyota will feature in arena activities and fan engagements throughout the playoffs.

- ***Playoff Schedule Update:***
- The Flyers' playoffs began on April 18 against the Pittsburgh Penguins, with the first home game on April 22. Tickets are available at PhiladelphiaFlyers.com.
- ***Ignite the City Events:***
- ****Philadelphia Skyline Lighting:**** The skyline will glow in Flyers orange for the Stanley Cup pursuit.
- ****"Ignite the Orange" Bus Tour:**** On April 20, join alumni and Gritty for a tour stopping in various locations, with ticket giveaways for home games.
- ****Pep Rally at Comcast Center Plaza:**** On April 21, from 11:30 a.m. to 1 p.m., fans can attend a free pep rally with Gritty, games, and giveaways, including chances to win tickets. Whether you're a lifelong fan or new to the Flyers' community, this is a thrilling time to be part of the action. (Source: NBC)

Kentucky boy uses mom's phone to order 70,000 Dum-Dum lollipops to share with his friends

A Kentucky mom found herself knee-deep in a lollipop avalanche when her little mastermind, 8-year-old Liam, decided to throw a carnival with 70,000 Dum-Dum suckers as prizes—all ordered via her phone! Holly LaFavers' jaw hit the floor when she saw 22 cases of candy on her doorstep, with her bank account \$4,000 lighter. Despite her mad scramble to cancel the order, the lollipop landslide was unstoppable. After realizing they were still missing eight cases, she managed to return them to sender. Though it took some sleuthing with her bank and a bit of media spotlight, she finally got her cash back. Lesson learned, she's now put a lock on her phone to prevent any future sweet surprises! An endangered mouse may need a helping hand to adapt to climate change

The Pacific pocket mouse, a diminutive rodent classified as critically endangered, possesses the potential genetic diversity necessary to adapt to climate change. However, urban sprawl has fragmented its populations. Once abundant along California's coastline, only three small groups remain, safeguarded by the U.S. Endangered Species Act. Habitat loss has resulted in inbreeding, reducing the genetic diversity essential for adaptation. To address this issue, conservation measures such as breeding programs and reintroductions into the Laguna Coast Wilderness Park are being implemented to enhance genetic diversity. Genetic research reveals that certain genes associated with heart function retain diversity, which may aid in adaptation. Released mice in the wild are exhibiting signs of acclimatization, benefiting from increased genetic variation. These efforts are vital for the species' survival and resilience amidst ongoing environmental challenges. By bolstering genetic diversity, conservationists aim to fortify the Pacific pocket mouse against the impacts of climate change, giving it a better chance of thriving in its natural habitat. The continued focus on protecting and restoring these populations is essential for the long-term survival of this unique species, highlighting the importance of targeted conservation strategies in the face of rapid environmental shifts.

Wontons in Chilli Sauce

Big, beautiful, bossy flavors ahead! Shiitake mushrooms and chicken wontons swim in a brothy flavor-filled sauce and get finished with a swirl of sesame oil and chili crisp on top. Yum!

INGREDIENTS

Chicken Wontons with Spicy Sauce:

- 3 tablespoons sesame oil, divided
- 8 ounces shiitake mushrooms, sliced
- 1 clove garlic, grated
- one 12-ounce bag frozen wontons (I like the mini chicken cilantro ones from Trader Joe's or Costco)
- 1–2 cups chicken broth (depending on how soupy you like it)
- 1/2 cup teriyaki sauce
- 1–2 tablespoons chili crisp

Toppings:

- green onions, sliced
- sesame seeds

INSTRUCTIONS

- Heat 1 tablespoon sesame oil in a large nonstick skillet over medium heat. Add mushrooms; sauté until softened and yummy. Add garlic for the last minute or two of sautéing.
- Add the frozen wontons, chicken broth, and teriyaki sauce. Simmer for 5 minutes, with a lid on, until the wontons are heated through.
- Finish with remaining 2 tablespoons sesame oil, chili crisp, and top with sesame seeds and scallions.
